Triage Assessment Report

> **Generated:** 2026-02-15 04:38:26 UTC> **Session:** shutdown | **Robot:** — | **Operator:** —

1) Chief Complaint (Victim's words)

alert how do I get

2) Mechanism / Context

Context from victim and scene.

3) Triage Priority (Speech-first)

Priority: DELAYED

Rationale: Assessment based on victim report and context.

4) Suspected Injuries (ranked differential)

No suspected injuries listed (speech-first module may not have run).

5) Do ASAP (robot + victim guidance, minutes)

- Call for human responders immediately; transmit location and report possible major bleed + suspected fracture if applicable.
- Screen red flags: 'Is bleeding soaking through in under a minute or spurting?' (upgrade to Immediate if yes).
- Screen: 'Can you wiggle fingers? Any numbness or tingling?' (vascular/nerve risk).
- Screen: 'Any trouble breathing, chest pain, or feeling faint?' (shock/airway).
- Shock prevention: keep victim warm, reassure, keep still.

6) For Responders on Arrival

- Neurovascular exam of limb: pulses, cap refill, sensation, motor function.
- Immobilization + analgesia + imaging: splint, pain control, X-ray, ortho evaluation.

7) Visual Evidence (supporting only)

No visual evidence captured.

Victim Q&A (recorded)

Question / key	Response
conscious	alert
notes_freeform	how do I get

Notes

- Generated on session end (shutdown).
